Description:

This machine ensures efficient and rapid thread rolling, meeting the demands of high-volume manufacturing environments. It is an ideal solution for high-quality thread rolling capabilities.

The thread rolling machine is a machine tool that forms threads on a workpiece through pressure. It mainly achieves thread, straight thread, oblique thread and other processing by rolling the workpiece in a cold state.

The thread rolling machine is a multifunctional cold extrusion forming machine tool. The thread rolling machine can perform thread, straight and diagonal rolling on the workpiece in the cold state within its rolling force range; straight tooth, helical tooth and helical spline gear Rolling; straightening, diameter reduction, roller burnishing and various forming rolling. The machine has a safe and reliable electro-hydraulic execution and control system, which allows each working cycle to be selected among three modes: manual, semi-automatic and automatic.
